Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from The Roman Comagmatic Region The present paper embodies the results of an investigation undertaken under the auspices of the Carnegie Institution of Washington, and is the continuation and completion of some studies which were published several years ago. Since the first publications much additional material has been collected, and, while my collections do not pretend to be exhaustive or complete, the specimens are so numerous and are regarded as so representative of the rocks of the region that they may properly serve as a basis for some general discussion. One of the objects of the paper is the detailed description of the many rare rock types characterized by the presence of leucite, for which the Italian volcanoes are so famous, and most of which are very inadequately known. It was thought also that a careful chemical study of these, as well as of the accompanying non-leucitic rocks, might throw some light on the magmatic and physical conditions which are involved in and control the formation of this rare and interesting mineral. Another aim was the...
